A Note on: Fenyö, A., and Frey, T., Modern Mathematical Methods in Technology, Vol. I, North-Holland Publishing Company, Amsterdam, 1969

(Recibido el 9 de Febrero, 1978)

Recently working on a paper on integral equations (1), The authors found that on page 136, the first two expressions (and consequently that follow) are incorrect. As $\phi(t)$ denotes the production per unit time at the time t , the correct form of the difference of the production and the loss is

Consequently, the following expression, i.e. the integral equation related to the production problem should be

$$\int_0^t \phi(t) dt - \int_0^t k(t-x) \phi(x) dx \quad (1)$$

$$\int_0^t \phi(t) dt - \int_0^t k(t-x) \phi(x) dx = M k(t) \quad (2)$$
